Import Invoices - BAR3600

Accounts Receivable > Utilities > Import Invoices

This utility is used to upload a comma-delimited text (.txt) or comma-separated values (.csv) file to create invoice records. Once the records are imported, the invoices are given an "Approved" status. The invoices can be printed; however, cannot be edited or deleted.

Notes:

- A separate invoice record is created for each row of data in the file, and the Invoice Numbers are assigned in sequential order.
- Commas may only be used in the file to separate data values, not within a field (e.g., (Invoice) Description field).
- Decimal places are not implied for amounts (e.g., 6789 indicates \$6,789.00 and 67.89 indicates \$67.89). You can enter 11 numeric characters with two decimal places, or if using whole numbers, you can enter nine numeric characters.
- Account codes are validated on the Finance > Maintenance > Create Chart of Accounts page.
