Generate the Status Report

[Asset Management > Reports > Asset Management Reports > BAM1050 - Status Report](#)

Run the BAM1050 - Status Report to review any asset items that were sold, deleted, or entered in error. All items entered in error, for sale, or to be deleted must have a status code change on the [Asset Management > Maintenance > Inventory Maintenance > Inventory Records](#) tab to reflect their status.

Use the status codes created for your LEA that reflect an action to remove the item from the inventory when the EOY process is performed.
