## Calculating Days Earned With Absence Deduction

When an employee has an absence deduction because of a transmittal or a leave dock, the days earned reported for the payroll are adjusted based on the dock amount and the employee's daily rate.

Some of the images and/or examples provided in this document are for informational purposes only and may not completely represent your LEA's process.

#### **Single Accruing Job**

1. Determine how many days are to be accrued for the pay period. This can be found on the Accrual Calendar.

**Example**: 20 days

2. Because the employee is being docked \$150.00, the number of days worked must be adjusted.

Amount Docked/Daily Rate = **Days Docked** 

Example: \$150.00/\$205.83 = 0.7288 Days Docked

3. The adjusted accrued days and adjusted pay must be calculated.

Days from Accrual Table - Days Docked + Days Refunded = Adj Accrued Days

**Example**: 20 - 0.7288 + .00 = 19.27 Adj Accrued Days

#### **Multiple Accruing Jobs**

The following steps must be performed for each accruing job:

1. Determine how many days are to be accrued for the pay period. This can be found on the Accrual Calendar.

Example: 20 days

2. Because the employee is being docked \$150.00, the number of days worked must be adjusted.

Amount Docked/Daily Rate = **Days Docked** 

### **Example**: \$150.00/\$205.83 = **0.7288 Days Docked**

3. The adjusted accrued days and adjusted pay must be calculated.

Days from Accrual Table - Days Docked + Days Refunded = **Adj Accrued Days** 

**Example**: 20 - 0.7288 + .00 = **19.27 Adj Accrued Days**
