Select Function

The Function lookup is used to select a function(s).

Select a function(s):

- The functions(s) are listed in ascending order.
- To search for a specific function, begin typing the function or description name in the **Search** field. The list is automatically filtered to display the function(s) that contain the numbers or characters you have typed.
- When you locate the function you want to retrieve, select the corresponding check box and click **OK**. The lookup closes, and the field/parameter is populated with the selected function(s).
- Click **Cancel** to close the lookup without selecting a function.
