# School Calendar Domain

Resource/Entity	Error Message	Issue
CalendarDate	<p><b>409 CONFLICT</b>                      {message: "The value supplied for the related 'calendar' resource does not exist."}</p>	<p>Calendar date does not associate with a calendar.</p>
CalendarDate	<p><b>400 BAD_REQUEST</b>                      {message: "Validation of 'CalendarDate' failed. Validation of 'Extensions' failed. CalendarDateExtension (TX): The field SchoolDayOperationalMinutes must be between 0 and 600."}</p>	<p>Review Calendar Operational Minutes.</p>
Session	<p><b>400 BAD REQUEST</b>                      {message: "Validation of 'Session' failed. Unable to resolve value 'uri:/local.texas.gov/TermDescriptor#1' to an existing 'TermDescriptor' resource."}</p> <p><b>NOTE:</b> May affect other domains.</p>	<p>The TEA-defined Claim Sets do not allow vendors to create and send local descriptor values. By default, vendors are only able to send TEA or Ed-Fi namespace values. TEA will be updating their Claim Sets to allow vendors to create and send local values.</p> <p>Workaround: A user-defined Claim Set can be created in the interim to allow for local values to be created and supplied by the vendor. Users can clone the existing TEA-defined Claim Sets and modify the create, read, update, and delete rights on the descriptor resources.</p>
