Position Records File Layout

The Import Position Records page is used to import position records or distribution records into the position management tables. When importing position records, ensure the payroll frequency of the archived file is the same as that of the logged-on payroll frequency.

Notes:

- If importing current year records, you must be logged on to a current year pay frequency.
- If importing forecast records, you must be logged on to a next year pay frequency.
- The file type is comma-separated file.
- Leading zeros are required. For example, if the job code is 0204, then the file should have 0204 not 204.
- Amount columns that have decimal values should include the decimal point in the column. For example, if the amount is 210, then the file should have 210.00 not 2.10.

Position Records:

All fields with a Y in the 2nd column is required on every file upload.

Fields with an S in the 2nd column are only required if the position is filled (it is staff specific information).
