# Registration Import Guidelines

Used with ALL external registration systems.

Review the guidelines in [External Registration Setup](#) in TCC Technical Documentation.

## Notes:

- The export filename should be saved as: *enrollment.csv*.
- Headers are required. The data **MUST** be in the order as shown in the table below.
- New and returning students are loaded.
  - **New students:** The first character of the StudentID for New Students **MUST** be a single alphabetic (A-Z). This is generally determined by the third-party vendor. If one is not present in the saved export .CSV file, please append one to the existing StudentID value, as it is used in the import process to identify new students.
  - **Returning students:** Returning students should already have a record in ASCENDER (Student ID, Campus, Entry Date, School Year, SSN and DOB should match ASCENDER table data). The returning student should be active for the current school year.
  - The program accepts Social Security Numbers that begin with "S".
- Errors:
  - If a returning student does not have matching data in the fields listed below, the student will not import into ASCENDER and will produce an error.
  - Before attaching a .CSV file to the Jira ticket requesting an import, please review the saved export file for extra commas at the end of each line. Extra commas will cause the import to fail. Remove the extra commas manually using an application such as *Notepad* on Windows and resave the file before attaching to Jira ticket.
  - Students should have an active code of *1* and a status code of less than *4* in the campus for the current school year.
