

ASCENDER 9.0305

Release Date: 11/11/24 **ASCENDER Update:** 9.0305

https://help.ascendertx.com/releasenotes/doku.php/business/update_9_0305_known_issues

Payroll > Maintenance > Approve CIP Transaction

☐ Corrected the issue that caused the following SQL error to occur when trying to approve CIP transactions: *SQL Anywhere Error 274: Procedure or trigger calls have nested too deeply.*

Personnel > Maintenance > TSDS Days Employed Set

☐ Added a new page to keep a record of the number of days an employee has been employed for TSDS reporting purposes and manage begin/end dates if corrections are necessary. Each record displays the percent of day employed, the TSDS number of days employed, the begin and end dates, a date timestamp indicating when the record was created, and the module within the system where the update originated.

The screenshot shows a web application interface for 'Maintenance > TSDS Days Employed Set'. The top navigation bar is green with a home icon and the text 'Maintenance > TSDS Days Employed Set'. On the right, there is a dropdown menu labeled 'Personnel' and a grid icon. Below the navigation bar, there is a 'Save' button. Underneath, there is an 'Employee:' label followed by a text input field, a 'Retrieve' button, and a 'Directory' button. At the bottom, there is a table with the following headers: 'Percent Day Employed', 'TSDS # Days Employed', 'Begin Date', 'End Date', 'Update DTS', and 'Module'. The table body is currently empty, displaying 'No Rows'.

Percent Day Employed	TSDS # Days Employed	Begin Date	End Date	Update DTS	Module
No Rows
