ASCENDER Student Known Issues

The implementation of these updates on the ASCENDER import utility will occur in two different software releases. In the current release, the import utility will be updated to support the new file format, which includes changes to field positions and record length. In the next release, additional fields under the "Latest SAT Knowledge and Skill" category will be incorporated into the test scoring table, User Interface (UI), and import utility. As a result, any records containing data in these new fields will need to be re-imported after the second release. The import utility is designed to process test scores using either a .txt positional file format or a CSV file format, accessible via Test Scoring > Utilities > Import Test Scores > SAT Test.
