Select Language

The Language Code lookup is used to retrieve the code for a specific language.

Select a language:

Languages are listed in order by code. The list can be re-sorted.

You can re-sort the grid by clicking on an underlined column heading. It will sort in ascending order. Click it again to sort in descending order.

A triangle next to the column heading indicates the column by which the grid is currently sorted and whether it is sorted in ascending or descending order.

1. To search for a specific language, begin typing the code or language in the **Search** field. The list is automatically filtered to display the languages that *contain* the characters you have typed.
2. When you locate the language you want to retrieve, click the code.
3. The lookup closes, and the field or parameter is populated with the selected code.

Click **Cancel** to close the lookup without selecting a language code.
