Import Immunization From TREx 1

Import Immunization From TREx

Registration > Utilities > Import Immunization From TREx

This utility imports immunization records from a Texas Records Exchange (TREx) file for students who transfer from another Texas LEA or charter school. A student must be enrolled at the new district in the TxEIS Registration application prior to running the import.

- The TREx file lists immunization doses in numeric values, which are stored in TxEIS as the series number. Valid values for the series number are 1, 2, 3, and B (booster). When importing an immunization record, all doses greater than 3 are converted to B.
- You can view a list of valid TxEIS immunization types on Health > Maintenance > Tables > Immunization Type. Codes 01-30 are TxEIS-defined immunization types which can be imported. Codes 90-99 are district-defined immunization types and cannot be imported using this utility.
- The student's SSN, gender, and date of birth on the TREx file must match the student's data in TxEIS for the record to be imported successfully.
- The report displays immunization records that were successfully imported, duplicated, and those that could not be processed.

Import data:

1. Click **Browse**, then click **Choose File**. Locate and select the text file.
2. Click **Submit**.

Field	Description
File Name	The selected file name is displayed.

Click **Import**.

- A message indicates that the process is completed. Click OK.
- The immunization record listing is displayed.
