Sections (Unload) 1

Sections (Unload)

Scheduling > Utilities > Import > Sections (Unload)

The utility imports sections, overwriting current sections.

The utility will not import invalid course sections (e.g., course sections no longer offered in the district or on the campus).

NOTE: If the course sections are invalid because a new course number length has been committed on Maintenance > Master Schedule > District > District Control, the program will convert the course request from the import file to the new course number and import the record with the new course number.

Import sections:

ASCENDER
ELEVATING TECHNOLOGY SOLUTIONS
ASCENDER GUIDES
