Student Requests (Unload) (Import) 1

Student Requests (Unload) (Import)

Scheduling > Utilities > Import > Student Requests (Unload)

The utility imports student requests, overwriting current student requests and schedules.

The utility will not import invalid course requests (e.g., courses no longer offered in the district or on the campus). If the course requests are invalid because a new course number length has been committed on the Maintenance > Master Schedule > District

> District Control tab, the program will convert the course request from the import

file to the new course number and import the record with the new course number.

Students with an enrollment status of 1 will have this status updated to 2, if the courses for that student are imported.
