# Check Processing - Purchase Authorization - FIN3200

## **Finance > Maintenance > Postings > Check Processing - PA**

This tab is used to post a transaction for a computer check or post a district check for a payment authorization. When posting a transaction or district check by PA, the general ledger expenditure and contra accounts are automatically updated. Additional PA updates are not necessary when paying a PA since there are no encumbrances.

When posting invoices in the Check Processing - PA tab, an account should be entered in the detail section. It is important that you tab out of the field after making an entry, as this allows the summary information to be updated.

Duplicate PA numbers can be used as long as the vendors are not the same. If you enter multiple invoices for one account, it is important to save the data after each entry. When you do not save each entry, the amount originally entered is overwritten with the new amount, and the transaction only posts the new amount when saved. Fifteen transactions can be placed on a single vendor check before the transactions flow over to the next check. The totals are displayed on the last check to that vendor. All previous checks are then voided. If the transaction contains the same object code contained in the Asset Management Cross-Reference Table, the information for extract to Asset Management is retained.

## **Retrieve an existing check transaction for a PA:**

<b>Retrieve an existing record.</b>	<p>In the <b>PA Number</b> field, type an alphanumeric purchase authorization number, hyphens are allowed. If the PA number is numeric, leading zeros are not required.</p> <p>In the <b>Vendor Number</b>, type the vendor number. If the vendor number is numeric, leading zeros are not required.</p> <p>Click <b>Retrieve</b>. If the purchase authorization number is not known, click <b>Directory</b>.</p> <p>To search for a specific purchase authorization number, type data in one or more of the search fields.</p> <p>To search through all available data, leave all fields blank.</p> <p>Click <b>Search</b>. A list of purchase authorization numbers matching the search criteria is displayed.</p> <p>Select a purchase authorization number from the list. Otherwise, click <b>Cancel</b>.</p>
<b>View Account Details</b>	Selected by default to display the detail section. Clear the field to hide the detail section.

## Create a check transaction for a new or an existing PA:

In the transaction section, select an existing PA. The system displays the transaction details for the PA in the detail section and the transaction summary for the PA in the summary section.

Click **Add PA** to add a new PA.

Field	Description
<b>Add PA</b>	If <b>Use Automatic PA Number Assignment</b> is selected on the Tables > District Finance Options > Finance Options tab, the <b>PA Nbr</b> field displays AUTO. Once the record is saved, AUTO is replaced with the next available PA number. If <b>Use Automatic PA Number Assignment</b> is not selected on the Tables > District Finance Options > Finance Options tab, the <b>PA Nbr</b> field is editable and a PA number must be entered. If the PA number is numeric, leading zeros are not required.
<b>Vendor</b>	Begin typing the vendor name or number. As you type the data, a drop-down list of corresponding data is displayed. Select a vendor number or name. Only active vendor numbers are displayed.  An inactive vendor number is displayed if the vendor has check transactions that have not been printed or a purchase order that still has a balance. Once all check transactions have been paid and all purchase order balances are zero, an inactive vendor number is no longer displayed in the drop-down list.

Click **+Add** to add a transaction.

<b>Proc</b>	Selected if the PA has been paid (a check has been issued) and the transaction has been through end-of-month processing. The field is not selected if the PA is unprocessed.
<b>Acct Per</b>	The accounting period for the transaction is displayed.
<b>Account Code</b>	<p>Type an account code. As you type the account code, a drop-down list of corresponding account numbers is displayed. Select an account number.</p> <p>If the account code is not known, place the cursor in the account code field and press F2. Or, click . The Account Codes lookup is displayed.</p> <p>To search for a specific account code component, type data in the applicable account code components, or leave blank for all account codes.</p> <p>Click <b>Search</b>. A list of available account code components is displayed.</p> <p>Select an account code component from the list. Otherwise, click <b>Cancel</b> to return to the Purchase Order page.</p> <p>Click <b>Validate Account Code</b> to verify the account code for the transaction.</p>

<b>Type</b>	Click  to select either computer- or district-type check. The following table shows which fields are required depending on the selection in the <b>Type</b> field.		
	<b>Field to Fill In</b>	<b>Computer</b>	<b>District</b>
	<b>Check Nbr</b>	No	Yes
	<b>Check Date</b>	No	Yes
	<b>Reason</b>	No	No
	<b>Invoice Date</b>	No	No
	<b>Invoice Nbr</b>	No	No
	<b>Contra Account Code</b>	No	Yes
	<b>Due Date</b>	No	No
	<b>Print</b>	Yes	No
<b>Check Date</b>	This field is only enabled after District is selected as the check type to be issued. Type the date the district check is issued.		
<b>Reason</b>	Type a user-defined reason for the transaction. The field can be a maximum of 30 characters.		
<b>Net Expend Amt</b>	Type an amount for the check transaction.		
<b>Invoice Date</b>	Type the date of the invoice being paid by the transaction.		
<b>Invoice Nbr</b>	Type the invoice number being paid by the transaction. The system verifies that the vendor and invoice number combination does not exist in the current or previous file ID. If the system finds the invoice number in a previous file ID, a warning message is displayed to continue using that invoice number or to enter a new number.  <b>Note:</b> The <b>Invoice Nbr</b> field is automatically filled using data from the previous row when the <b>Net Expend Amt</b> field is entered or modified on the selected row and the <b>Invoice Nbr</b> field on the selected row is empty.		
<b>Contra Account Code</b>	When a purchase authorization is created, the field defaults to the payable object/subobject account on the District Finance Options > Clearing Fund Maintenance page with the same fund number and fiscal year as the account number that monies are being expended against. You can modify the contra account for a district check; however, the fund and fiscal year must be the same as the account number.		
<b>Due Date</b>	The due date represents the date that the check is to be processed. The field is automatically populated with the current system date if <i>D - Use Due Date for Payables</i> is selected on the District Finance Options page. Otherwise, enter a due date in the MMDDYYYY format.  <b>Note:</b> If <i>D - Use Due Date for Payables</i> is selected, the system uses the date to determine whether it is time to print a check for the selected transaction. If the due date is within the range that the user listed on the Process Check page, or if the range is left blank, the check is printed. Otherwise, the transaction is retained until the due date is within the requested range. If you change the Payables Due Date option to <i>T - Use Transaction Date for Payables</i> , the check is printed during the next check process.		

<b>EFT</b>	<p>Select to disburse the payment via an electronic funds transfer. By default, By default, the <b>EFT</b> field is automatically selected if the vendor retrieved has bank information on the Maintenance &gt; Vendor Information &gt; Vendor Miscellaneous tab and an EFT email address on the Maintenance &gt; Vendor Information &gt; Vendor Name/Address tab. If a check is needed, unselect the <b>EFT</b> field.</p> <p><b>Notes:</b></p> <ul style="list-style-type: none"> <li>The vendor must have bank information and an EFT email address on file to be eligible for an electronic funds transfer.</li> <li>This field is not displayed for purchase orders that were created using a credit card code.</li> <li>If <b>Separate Check</b> is selected, <b>EFT</b> is unselected. Leave <b>Print</b> selected as this allows the transactions to be processed during the check run.</li> </ul>
<b>Print</b>	<p>Selected automatically when the transaction is created, and a check is printed, if the criteria for issuing the check (e.g., date or account balance) is met. You can clear the <b>Print</b> field, and the transaction is not processed when the checks are issued.</p> <p><b>Note:</b> If the field is not selected and end-of-month processing has occurred, the transaction is considered a deferred check transaction. When the user is ready to print the transaction, he must select Print. If date ranges are used as a criteria for selecting checks for processing, the date of the transaction must be included in that selection criteria in order for it to be processed.</p> <p>You can verify all deferred checks by printing an Accounts Payable Listing (FIN1700). It is the only report in the system that prints both the due date and the entry dates. Other reports that would be helpful are the Expenditure and Liquidation Journal, the Capital Outlay Expenditure Report, the Check Register and Check Transaction Listing, and the Check Payment Listing.</p>
<b>Separate Check</b>	<p>Select if a vendor has multiple transactions and/or multiple purchase authorization transactions and you need a separate check for one (or more) transactions. When selected, the associated transactions are displayed as separate check items in the list of checks to be processed.</p> <p>When checks are processed, those transactions with <b>Separate Check</b> selected are issued separately. This functionality creates a single check per vendor per PO/PA number. If selected, a credit memo is not be applied and the check amount will be for the full amount. Check transactions without <b>Separate Check</b> selected are grouped by the vendor number.</p> <p><b>Example 1:</b> There are three separate PAs for the same vendor. The first PA has two transactions, one of which has <b>Separate Check</b> selected and the other does not. The second PA has a transaction that does not have <b>Separate Check</b> selected. The third PA has a transaction that also does not have <b>Separate Check</b> selected. When checks are processed, two checks are issued: one for the transaction with <b>Separate Check</b> selected and one for all the other transactions for that vendor.</p> <p><b>Example 2:</b> There is one PA with two transactions for the same vendor. One transaction has <b>Separate Check</b> selected, the other does not. When checks are processed, two checks are generated.</p> <p><b>Example 3:</b> There is one PA with two transactions for the same vendor. Both transactions have <b>Separate Check</b> selected. When checks are processed, one check is generated.</p>
<b>Trans Date</b>	<p>The current system date is displayed by default. If the transaction has not been through end-of-month processing, the date can be modified.</p>

<b>User ID</b>	The name of the user who created the transaction is displayed. Users are created in the Security Administration application.
----------------	--

In the summary section, a running total of all check transactions entered is displayed:

<b>Account Code</b>	The account code selected when the purchase order transaction was created is displayed.
<b>Description</b>	The general ledger description of the account code is displayed.
<b>Balance Amt</b>	The current available balance for the selected account is displayed.
<b>Net Expend Amt</b>	A running total of all detail transactions for each account code is displayed.

### **Reverse a computer check transaction for a PA:**

You can reverse a check transaction for a PA only in the detail section of the tab. The following rules apply to reversing a check transaction for a PA:

- Check transactions for PAs created in the current accounting period can only be reversed in the current accounting period.
- Check transactions for PAs created in the next accounting period can only be reversed in the next accounting period.
- Deferred check transactions for PAs can only be reversed in the current accounting period.
- Deferred check transactions are displayed in the next accounting period, but can only be reversed in the current accounting period.
- Once a deferred check has been paid, the Reason column cannot be modified.

In the detail section, select a transaction to be reversed.

Click **Reverse PA**. In the detail section, a row is added with the same account code, description, and contra account code, but with a negative amount in the **Net Expend Amt** field.

<b>Reason</b>	REVERSAL is displayed.
<b>Trans Date</b>	The current system date is displayed by default, but it can be modified. If it is modified, all new transactions default to the last transaction date that was entered.
<b>User ID</b>	The name of the user who created the transaction is displayed. Users are created in the Security Administration application.

In the summary section, the negative amount from the detail section is added to the **Balance Amt** field and resets the **Net Expend Amt** field to zero.

### **Void a district check transaction for a PA:**

You can void a district check transaction for a PA in the detail section of the tab prior to EOM processing.

In the detail section, select a district check transaction to void.

- Click **Reverse PA**. In the detail section, a row is added with the same account code, description, and contra account code, but with a negative amount in the **Net Expend Amt** field.

<b>Reason</b>	Type the reason for the reversal.
<b>Trans Date</b>	The current system date is displayed by default, but it can be modified. If it is modified, all new transactions default to the last transaction date that was entered.
<b>User ID</b>	The name of the user who created the transaction is displayed. Users are created in the Security Administration application.

Click **Save** to save. A pop-up is displayed with the balance amounts prior to and projected for the transaction.

- Click **Yes** to continue.
- Click **No** to cancel.

You must correct any imbalance prior to saving the record.

### Other functions and features:

<b>Retrieve</b>	<a href="#">Retrieve data.</a> The <b>Retrieve</b> button is also used to retrieve information from the last save. If you click <b>Retrieve</b> , any unsaved changes are lost.
<b>+Add</b>	<a href="#">Add a row.</a> Click to add a row to the grid or press ALT+1. <b>Note:</b> When using ALT+1 to add a new row to the grid, you must use the 1 key on the keyboard, not the 1 key on the numeric keypad.
<b>Delete PA</b>	Click to delete a purchase authorization.
