PO Object Code Restriction

Click ▼ to select the allowed range of object codes to be used on requisitions. Only account codes with object codes in the selected range are allowed.

- R - Class 62XX-64XX and 66XX
- E - Class 6XXX and 8XXX
- A - Class 1XXX, 2XXX, 6XXX and 8XXX
- C - Class 1XXX, 2XXX, 62XXX-64XX and 66XX

If an account code entered on a requisition does not meet the selected criteria, an error message is displayed.

Print Federal ID Number on PO

Select to print the federal ID number on purchase orders in Purchasing.

If blank, the federal ID number is not printed on purchase orders.

Reset Approval Path Purchasing

Select to reset the approval path of a requisition when the amount or account is changed by an approver during the approval process.

If selected and changes are made to a requisition, the requisition is automatically returned to the originator and must be resubmitted by the originator. After the requisition is resubmitted, it must go through the approval path again. When a change is made, an email message is sent to the originator.

If not selected, changes are allowed by the approver and the requisition continues through the approval path.
