# School Calendar Domain

| Resource/Entity | Error Message | Issue |
|---|---|---|
| CalendarDate | **409 CONFLICT**<br>{message: “The value supplied for the related 'calendar' resource does not exist.”} | Calendar date does not associate with a calendar. |
| CalendarDate | **400 BAD_REQUEST**<br>{message: “Validation of 'CalendarDate' failed. Validation of 'Extensions' failed. CalendarDateExtension (TX): The field SchoolDayOperationalMinutes must be between 0 and 600.”} | Review Calendar Operational Minutes. |
| Session | **400 BAD REQUEST**<br>{message: “Validation of 'Session' failed. Unable to resolve value 'uri:/local.texas.gov/TermDescriptor#1' to an existing 'TermDescriptor' resource.”}<br><br>**NOTE**: May affect other domains. | The TEA-defined Claim Sets do not allow vendors to create and send local descriptor values. By default, vendors are only able to send TEA or Ed-Fi namespace values. TEA will be updating their Claim Sets to allow vendors to create and send local values.<br><br>Workaround: A user-defined Claim Set can be created in the interim to allow for local values to be created and supplied by the vendor. Users can clone the existing TEA-defined Claim Sets and modify the create, read, update, and delete rights on the descriptor resources. |
