# District Yearly Count

## Attendance > Utilities > District Yearly Count

This utility calculates student average daily attendance (ADA) absences from the beginning of the current school year to a specified as-of date. Attendance can be computed across all campuses and grade levels. [Maintenance > Student > Student Inquiry > District Yearly Count](#) is updated when the utility is run.

The utility can be run throughout the year.

- Run at the end of the first semester and periodically to obtain a pattern of attendance information.
- Run at the end of the school year to obtain end-of-year totals.

The fields only restrict the student records that are updated; they do not affect attendance calculation.

### Update data:

<b>As of Date</b>	Type the ending date in the MMDDYYYY format, or click  to select the date from a calendar. Membership days will be calculated from the first day of school to this date.
<b>Campus</b>	Select a campus, or leave blank to calculate absences for all campuses.
<b>Grade</b>	If you selected a campus, you can select a grade level. Leave blank to calculate absences for all grade levels.
<b>Student ID</b>	Type a six-digit student ID to calculate absences for one student, or leave the field blank to calculate absences for all students. If you enter a student ID, leave <b>Campus</b> and <b>Grade</b> blank.

Click **Calculate Att. Days**.

When finished, the number of updated students is displayed.

### Other functions and features:

**Clear** Click to clear the selections in the fields.
